THREAT BRIEFING · 2027

8 AI-driven threats. One control that stops each.

Score yourself as you swipe: one point for every “yes”. Your result is on the last slide.

01

THREAT 1 OF 8

Deepfake fraud

HOW IT HITS

A cloned voice or live video of your CEO or CFO asks for an urgent payment or a password reset.

THE CONTROL THAT STOPS IT

Call back on a known number before any payment, bank-detail change or access reset. No exceptions for urgency.

- [ ] **Do payment and access changes always need a call-back to a known number?**

02

THREAT 2 OF 8

AI-written phishing

HOW IT HITS

Flawless, personalised emails written from your LinkedIn, website and leaked data. The old “spot the typo” training no longer works.

THE CONTROL THAT STOPS IT

Phishing-resistant MFA (passkeys or security keys), starting with admins and finance.

- [ ] **Do admins and finance staff sign in with passkeys or security keys?**

03

THREAT 3 OF 8

Ransomware with double extortion

HOW IT HITS

Attackers steal your data first, then encrypt it, and threaten to publish it even if you restore.

THE CONTROL THAT STOPS IT

Offline or immutable backups that you actually restore from, plus alerts on large outbound transfers.

- [ ] **Have you restored from an offline backup in the last 6 months?**

04

THREAT 4 OF 8

Prompt injection and AI agent abuse

HOW IT HITS

Hidden instructions in an email, page or file make your AI assistant leak data or take actions.

THE CONTROL THAT STOPS IT

Least privilege for AI agents, and human approval before they send, delete, share or pay.

Do your AI assistants need human approval before acting?

05

THREAT 5 OF 8

Session and token theft

HOW IT HITS

Infostealer malware copies logged-in sessions, so attackers walk past passwords and MFA.

THE CONTROL THAT STOPS IT

Short sessions, managed devices only, and alerts when a session appears on a new device or country.

☐ **Would you notice a valid session used from a new device?**

06

THREAT 6 OF 8

Supply-chain compromise

HOW IT HITS

A trusted vendor, plugin or software update becomes the way in, with access you already granted.

THE CONTROL THAT STOPS IT

Know every vendor and integration that can reach your data, and give each the least access it needs.

- [ ] **Do you have a current list of vendors and tools that can reach your data?**

07

THREAT 7 OF 8

Cloud and API exposure

HOW IT HITS

A forgotten API or misconfigured storage bucket exposes data with no hacking skill needed.

THE CONTROL THAT STOPS IT

Inventory every internet-facing API and cloud service, require authentication, and scan for misconfiguration.

- [ ] Do you have an up-to-date inventory of your internet-facing APIs?

08

THREAT 8 OF 8

Exploits in hours, not weeks

HOW IT HITS

AI helps attackers turn a newly published vulnerability into a working exploit within hours.

THE CONTROL THAT STOPS IT

Patch known-exploited vulnerabilities on internet-facing systems within days, and shrink what is exposed.

- [ ] **Are known-exploited flaws on internet-facing systems patched within days?**

YOUR SCORE

How many “yes” answers did you get?

7–8	Resilient. Keep testing it.
4–6	Exposed in places. Fix the gaps first.
0–3	High risk. Start with backups, MFA and approvals.

Get your full score and top gaps in 2 minutes. Free, no sign-up.
